DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 13-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. In claim 13, line 5, it is not clear what is meant by "describing a subclass each of said training set".

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 2-16 are rejected under 35 U.S.C. 101 because the claimed invention lacks patentable utility. The present invention is directed to data manipulation for the purpose of protocol analysis. For example, claim 2 recites grouping times, which comprises a calculating step and a forming step. What is recited here is an abstract idea since a practical application is lacking. The steps performed are merely data manipulation and therefore lacks physical application that produces a useful, tangible, and concrete result.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

7. Claim 9 is rejected under 35 U.S.C. 102(e) as being anticipated by Han, US 6,104,835.

Han discloses a method for automatically generating a knowledge database in an object classification system. Specifically regarding the present invention, Han teaches forming derived features on the basis of statistical measures in the form of arithmetic terms (forming a plurality of descriptor vectors corresponding to the training images, see Abstract, and Fig. 1B); and formulating logic conditions on numerical values of the group consisting of the features from the training set and the derived features (logic condition 401 is formulated which uses the outcome of operation block 300 of Fig. 1A, see Fig. 1E-1).
